EDUCATION

Michigan State University
B.S Computer Science – GPA 3.8

East Lansing, MI
Expected Graduation May 2026

TECHNICAL SKILLS

Languages: HTML, CSS, JavaScript, Python, PHP, MySQL, Java, Kotlin, C++, TypeScript, Shell Scripts

Frameworks & Libraries: React, React Native, Node.js, Express.js, Flask, Drupal, Jetpack Compose, TensorFlow, Scikit-learn, NumPy, Pandas, Seaborn, JEST

Tools & Technologies: AWS, Azure, Firebase, MongoDB, Git, GitHub, Docker, Linux, Fast API, Android Studio, Figma, Jupyter, Google Colab, MATLAB

EXPERIENCE

Application Developer | *Python, Open AI, AI Agent development, MCP, Angular, Java, MySQL, Git, Bitbucket, Apache Tomcat, Oracle Database, Spring Boot, Agile*

Delta Dental of Michigan

December 2024 -Present

- **Audit API Development (Oracle SQL, Spring Boot, Angular):**
 - Improved audit capabilities for dental insurance contracts **impacting 22M+ users** in different states by developing and maintaining multiple audit processes within Roosevelt Solutions, collaborating with interns and full-time engineers under Agile workflows.
 - Accelerated backend efficiency and reduced API errors by designing API documentation (**OpenAPI spec**) and implementing **robust Spring Boot endpoints**, supported by **complex SQL queries** to retrieve audits and detailed coverage of performance and security.
 - Increased code reliability and developer efficiency by collaborating on Spring Boot APIs using **Test-Driven Development (TDD)** and **integrating them with Angular-based UI components**, enabling admin users to seamlessly access audits.
- **AI Agent Automation (Azure OpenAI, Azure Document Intelligence, FastAPI, Angular):**
 - Automated eligibility determination and reduced manual processing time by **building reusable AI agents leveraging Azure OpenAI and Azure Document Intelligence**, deployed via a FastAPI application to extract structured data from enrollment documents.
 - **Scaled** processing of large enrollment datasets by implementing **concurrent execution in Python using asyncio**, significantly improving throughput and reducing end-to-end document processing latency.
 - Enhanced user experience and adoption of AI-powered workflows by **designing and developing an intuitive Angular UI component within Roosevelt Solutions**, enabling admin users to interact with the AI agents seamlessly.

Student Web Developer | *PHP, MySQL, PostgreSQL, Devilbox, Object-Oriented Programming, Docker, Git, Gitlab, Linux*

Michigan State University

Jan 2023 – May 2025

- **Developed** solutions and fixes using **PHP, MySQL, and Devilbox** to resolve 20+ technical issues in websites and assisted the team in 2 long-term projects under the Residential and Hospitality (RHS) Department using Drupal Content Management System (CMS) and Symfony framework.

- **Developed** a custom module in **PHP** using **Drupal Hooks** with **Object-Oriented Principles** to customize the output of the **XML feed** of the upcoming events at multiple venues in MSU and added it as a **git submodule** in our **Gitlab** repository and used it on different websites.
- **Refactored** the MSU Sports Camps site using Drupal **to improve stability, performance, and user experience** for 2000+ end-users, maintaining a vital platform generating over \$1M annually in program revenue.

PROJECTS

Targetist | *React Native, Expo, TypeScript, AWS EC2, Amazon EventBridge, AWS Amplify, AWS Lambda, Python, Shell Script, CI/CD, MongoDB, Node JS, Express JS, Git, GitHub, Agile development*

- **Designed and developed** the mobile experience of an AI task-automation app using **React Native, Expo, and AWS Amplify**, delivering a polished, secure iOS product that reached 100 users within the first month.
- **Architected** a scalable cloud and ML pipeline with **AWS SQS, EventBridge, Lambda, SageMaker**, and Python models, enabling reliable automation and reducing backend overhead for rapid iteration.
- **Drove** cross-functional development as part of a four-member founding team, **integrating APIs, setting up CI/CD** with GitHub Actions, and pitching at competitions and VC demos, accelerating development velocity and early product adoption.

CrashEye Crash Detection System | *Mongo DB, Express JS, Node JS, React, Electron JS, AWS EC2, Git, GitHub*

- **Collaborated** with a team of 3 to develop an AI based software crash detection system using **MERN stack** (frontend) and **Python** (backend) which empowers developers to swiftly identify and categorize the type of software crash that occurred in users' system eliminating the need for manual report submissions and significantly streamlining the development process.
- **Developed** the frontend using the **MERN stack** and executed it in the desktop using **electron JS**, by developing the authentication mechanism and the data extraction on an **Express JS** and **Node JS REST API** and building the client-side using **React JS** and using the **Axios** library to make different requests to the API and **hosted** it on **AWS EC 2** virtual server.

Amazon Clone | *Next JS, NextAuth, Redux, Stripe Payments API, Google Cloud, Webhooks, Firebase, Git, GitHub*

- **Built** a clone of the Amazon website using **Next.js** on the frontend, added products to the website using **Fakestore API**, **authenticated** users through the Google Authentication Provider from **NextAuth.js**
- **Created a Redux store** to contain the items added by the user to the basket, and used the library to keep the basket stored in the user's local cache to make it accessible any time they want, added **Stripe API** to the site to handle payments and order storage using **webhooks**.
- Used **Google Cloud** Functions to create an Application Default Credential using a service account key to access the Firebase database and display a user's previous orders.

ACHIEVEMENTS

- **International Tuition Grant (MSU) – 2022 – 2026**
- **AWS Certified Developer Associate**
